Important Safety Instructions

READ ALL INSTRUCTIONS BEFORE USING HUMIDIFIER, ESPECIALLY THESE BASIC SAFETY PRECAUTIONS.

1. Always place humidifier on a firm, flat, level surface, at least FIVE inches away from walls and heat sources such as stoves, radiators or heaters. Humidifier may not work properly on a non-level surface.
 2. Place humidifier in an area that is out of the reach of children.
 3. Before using the humidifier, extend the cord and inspect for any signs of damage. **Do not** use the product if cord has been damaged.
 4. Humidifier should always be unplugged and emptied when not in operation or while being cleaned.
 5. Never tilt or move the humidifier while it is in operation. Shut off and unplug before moving.
 6. Humidifier requires regular cleaning. Read and follow *Care and Cleaning* instructions.
 7. In certain areas, tap water is extremely hard, containing a higher-than-normal concentration of various minerals. These minerals can be emitted into the air, possibly causing adverse reactions in people with breathing difficulties. In such cases, use only distilled or demineralized water and clean the humidifier every day. (See *Care and Cleaning* instructions).
 8. If you have breathing difficulties, consult your physician before using any humidification product.
 9. In hard-water areas a white dust may form on furniture. This can easily be wiped away with a cloth. To avoid the white dust, use distilled water.
- ☞ As a condition of sale, the purchaser assumes responsibility for the proper care and use of this appliance in accordance with our printed instructions. The purchaser or user must judge for himself or herself when to use it and length of use.

Troubleshooting

IF THE UNIT DOES NOT OPERATE:

- Check that polarized plug is fully inserted into wall outlet.
- Check airflow. Are there any obstructions preventing airflow?
- The motor contains a temperature-limiting fuse. If the motor overheats, the fuse will trip and shut off the motor. Unplug the unit and contact our Consumer Service Department. Do not attempt to repair the motor yourself.

IF YOU DO NOT OBTAIN ENOUGH HUMIDITY:

- Because of break-in characteristics, maximum output will not be reached until the unit has been used several times. If the air in the room is extremely dry, there will be greater absorption of the vapor and faster depletion of the water reservoir. As the humidity increases, output will decrease and adding of water will be required less frequently. This variation is normal.
- Under certain conditions the moisture output may not be visible. It is operating properly, however, if the water level goes down during usage, even when you cannot see the vapor.
- The DynaFilter cartridge may be clogged with pollutants and should be replaced.

IF YOU ARE OBTAINING TOO MUCH HUMIDITY AND WATER FALLS OUT AROUND THE UNIT:

- Room air may be excessively humid (greater than 50% relative humidity); do not use humidifier. Oversaturated air can cause condensation on cold walls or furniture. For proper humidity readings, use a hygrometer available in most hardware and department stores.
- The humidifier may need cleaning. Follow *Care and Cleaning* instructions.
- Medication or other additives may have been added to the water. Follow *Care and Cleaning* Instructions.

Limited Warranty

Models 4100, 4200 and 4220 are warranted against defects in materials or workmanship for 2 years from the date of purchase. The unit or part will be repaired or replaced at no charge if the unit is not tampered with and appliance has been used in accordance with the directions. This Warranty gives you specific legal rights and other rights which vary from state to state.

If you experience unsatisfactory operation, first refer to the troubleshooting section above to ensure that it is properly cleaned. Follow Care and Cleaning instructions.

If you have any questions or comments, call the Consumer Service Department at (800) 827-6712 or, write to Kaz Consumer Service Dept., One Vapor Trail, Hudson, NY 12534, enclosed with the product is operating. Specify model number. Our Consumer Service Representative will advise you how to correct the problem or will ask you to return the product for repair.

Order Information

To order replacement parts or DynaFilter K14-3, please refer to the simple instructions:

CREDIT CARD PAYMENT

We accept Visa® and MasterCard®.

TO ORDER BY PHONE

Call toll-free by dialing 1-800-827-6712. Please have your credit card handy for payment. Minimum credit card order is \$10.00.

TO ORDER BY MAIL

Mail your order to Kaz Consumer Service Department, One Vapor Trail, Hudson, NY 12534. Please clearly print your name, address, products ordered, and price extension. Enclose payment in a check payable to Kaz, Incorporated (no cash, please). Your check will be held 10 days for bank clearance.

TO ORDER BY FAX

Fax your order to Kaz Consumer Service Department, One Vapor Trail, Hudson, NY 12534. Please clearly print your name, mailing address, products ordered, and price extension. Specify either Visa® or MasterCard®, card number and expiration date, then *sign your name*. Minimum credit card order is \$10.00.

TO ORDER VIA THE INTERNET

E-Mail us at consumerservice@kaz.com. Be sure to include your mailing address, products ordered, and price extension. Specify either Visa® or MasterCard®, card number and expiration date. Minimum credit card order is \$10.00.

► DynaFilter K14-3 pack of 3 DynaFilters

► Output Grille for Model 4200 or Model 4220

Add \$4.00 per order for postage and handling. For international orders, please add applicable sales tax.

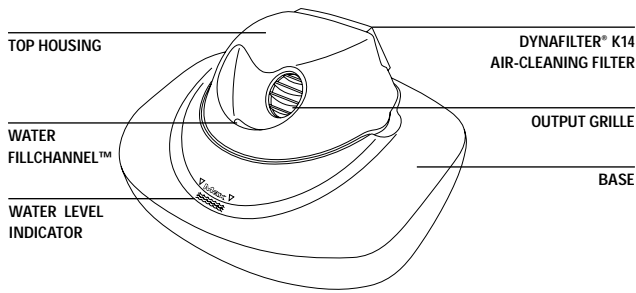

Note: Prices are subject to change without notice.

How Your Humidifier Works

MODEL 4100

MODELS 4200 AND 4220

The Kaz HealthMist® 4100, 4200 and 4220 models produce a cool mist through revolutionary new cyclone technology. The motor-driven impeller draws up water through a pickup tube. Centrifugal force throws the water through a screen into the vortex chamber, breaking up the water into a superfine, cool mist.

Each of these cool mist humidifiers restores healthy humidity levels to dry indoor air more efficiently than other impeller-type humidifiers.

THE AIR-CLEANING DynaFilter®

Kaz cool mist humidifiers include the exclusive Kaz DynaFilter K14. The DynaFilter removes dust, pollen, odors and tobacco smoke from the air, removing 93% of particles as small as pollen.

Under normal environmental conditions, the filter cartridge should be replaced every two months. Replacement time will vary depending upon the concentration of pollutants in the air. If you notice heavy dirt accumulation on the filter or if the humidifier output is significantly reduced, **it's time to change to a new DynaFilter!**

Kaz DynaFilter K14 cartridges are available at leading pharmacies and drug departments. You may also order directly from Kaz (see *Order Information* on back page).

Read and Save These

- 1. CAUTION: UNRAVEL CORD BEFORE USE.** Failure to do so is a safety hazard. Always disconnect cord at wall plug before removing cord from humidifier in use.
- 2. INSERT DYNAFILTER CARTRIDGE.** Simply remove the old cartridge and insert the new cartridge into the recess of the Top Housing. Inspect used DynaFilters. If you notice heavy dirt accumulation, it's time to change to a new DynaFilter.
- 3. PLACE HUMIDIFIER IN A SAFE POSITION** on a flat, level surface. Protect rug, floor or furniture by placing a mat or towel under the humidifier for protection against inadvertent spillage. **Do not** place the humidifier near air openings. Cord should be out-of-the-way, where it cannot be stepped on. When used therapeutically, the humidifier should be placed out of the reach of children.
- 4. FILL CAREFULLY.** The exclusive Kaz FillChannel™ is located on the front of the Top Housing. Model 4100: Pour cool tap water into the FillChannel™ until the Water Level Indicator on the front of bowl is visible. Models 4200 and 4220: Look down into the FillChannel™ until you see the water on lower step. Using a pitcher, add cool tap water until the water level is visible. **IMPORTANT: DO NOT OVERFILL,** as this may damage the humidifier's floors or furniture.
- 5. PLUG IN HUMIDIFIER.** Be sure that switch is in the Off position. Plug power cord into wall. **CAUTION: DO NOT PLUG IN THE CORD WITH THE HUMIDIFIER ON.** This product has a polarized plug (one blade longer than the other) which will fit into a polarized outlet only one way. If the plug does not fit, contact a qualified electrician. **feature.**
- 6. FOR MODEL 4200:** Turn switch to the On (I) position. **FOR MODEL 4220:** Turn switch to either of the On positions. **CAUTION:** Turn off the humidifier if moisture is visible on surfaces. Do not be excessively humid.
- 7. DIRECTING MIST (Models 4200 and 4220 only)** Use the nozzle to direct the mist from settling on tables or other pieces of furniture. **IMPORTANT:** To maintain proper operation, clean the nozzle according to instructions.

Care and Cleaning

Tap water may contain pollutants and minerals which can accumulate in the humidifier. Such scale can accelerate the growth of bacteria. Regular cleaning is performed as outlined below. Note: A heavy build-up of scale.

INSPECT THE DYNAFILTER

Remove and inspect the DynaFilter cartridge. If you notice heavy dirt accumulation, the filter needs to be replaced. If the filter is dirty, it will clog the filter, impair air flow, reduce the effectiveness of the humidifier.
